EASTER UPDATE

The special Easter update features a unique level available only during the holiday season. Players will navigate through a space filled not with the usual asteroids but with a flurry of Easter eggs. These eggs aren't just for show; they collide and form clusters that actively target the player's spaceship, adding a new layer of strategy and skill to the game. Adding to the chaos, a gigantic Easter chicken makes an appearance, altering the game's gravity at random and attracting various objects toward the player's ship. Among these is a deceptively cute but dangerous black hole, sucking in everything in its vicinity and posing a significant threat to players' survival.
